

Natural shaped, multi-gored N-Type envelopes provide an almost flat surface that is especially suited to the display of artwork. The 24 gore envelopes are constructed by sewing together 48 half-gores. Each half-gore is constructed from four nylon panels which are referred to - from the base of the balloon - as panels A,B,C and D.

The row of panels at the very bottom, those that form the mouth, are made from heat resistant Nomex.

A parachute top is standard up to N-145; Lock-Top on N-160. A fast deflation system is available on larger sizes. Parachutes are constructed from 24 panels that radiate from a centre patch.

There is no extra charge for changes of fabric colour at any of the lines shown on the chart if the colours are from the standard Cameron range.

Not to scale

Tick one standard load tape colour. White will be used unless indicated otherwise. BLACK WHITE
